## Abstracts

According to our (Global Info Research) latest study, the global Touchless 3D Four-Wheel Aligner market size was valued at US\$ 1041 million in 2025 and is forecast to a readjusted size of US\$ 1614 million by 2032 with a CAGR of 6.3% during review period.

In 2025, global production of touchless 3D four-wheel aligners reached 21,530 units, with an average selling price of US\$47,000 per unit. A touchless 3D four-wheel aligner is a specialized device that uses 3D vision measurement technology to perform high-precision, non-contact detection and adjustment of vehicle wheel alignment parameters. Its core working principle is to use multiple cameras to capture images of a dedicated calibration disc on the wheel, and then use computer vision algorithms to accurately calculate the actual values of key parameters such as wheel toe angle, camber angle, and caster angle in three-dimensional space. It has advantages such as higher measurement accuracy, more intelligent operation, and significantly improved efficiency. Non-contact 3D four-wheel aligners are widely used in automotive repair and maintenance (e.g., solving problems such as inaccurate wheel alignment and abnormal tire wear), automated production and quality inspection in automotive manufacturing assembly lines, and in fields with extremely high requirements for vehicle handling performance, such as racing car tuning and commercial vehicle fleet maintenance. They are key tools for ensuring vehicle driving safety, handling stability, and extending tire life. The upstream of the industry chain mainly consists of industrial cameras/lenses and optical modules, laser/projection and ranging elements, calibration fixtures and measuring instruments, industrial control computers/edge computing and software algorithms, vehicle specification databases and networking modules, as well as supporting tooling such as four-post/scissor lifts, cornering plates, and sliding plates. The midstream involves system integration manufacturing. Downstream applications

are concentrated in tire chains and quick repair chains, 4S/dealer after-sales service, independent comprehensive repair shops, fleet and rental company repair centers, and used car preparation centers. Gross profit margins range from approximately 30% to 55%.
