The global Tourmaline Stone market size is expected to reach \$ 2806 million by 2032, rising at a market growth of 7.8% CAGR during the forecast period (2026-2032).

Tourmaline stone is a crystalline boron silicate mineral compounded with elements such as aluminum, iron, magnesium, sodium, lithium, or potassium. It is known for its wide range of colors and piezoelectric properties, meaning it can generate an electrical charge under pressure or heat. Tourmaline is widely used in jewelry due to its beauty and durability, but it also finds use in health and wellness products for its ability to emit far-infrared radiation and negative ions, which are believed to improve circulation and detoxify the body. Its unique electrical properties also make it valuable in industrial and electronic applications.
