Abstracts

According to our (Global Info Research) latest study, the global Towed Air Source Vehicle market size was valued at US\$ 77.17 million in 2025 and is forecast to a readjusted size of US\$ 101 million by 2032 with a CAGR of 3.4% during review period.

In 2025, global Towed Air Source Vehicle production reached approximately 1,200 units. A towable air source unit is a specialized ground support equipment designed to provide compressed air for aircraft or ground equipment. It is typically moved to the operating position by towing with an external power vehicle or tractor and used at designated locations. Its main function is to supply stable high-pressure air for aircraft engine starting, air conditioning systems, or pneumatic equipment. The equipment generally consists of an air supply system, compressor, air storage tank, control system, and a chassis frame. It compresses air and delivers a stable output to meet the pneumatic requirements of different aircraft types. The towable design makes it relatively simple in structure and lower in cost, making it suitable for fixed airport support operations or scenarios with infrequent movement requirements. Towable air source units are widely used in civil airports, military airports, and aviation maintenance bases. They play an important role in supporting aircraft ground starting, maintenance, and testing operations, and are an essential component of airport ground support equipment systems.

The towable air start unit market has been continuously developing in recent years, driven by the growth of global air transportation, the improvement of airport support systems, and the increasing demand for aircraft ground operations. As an important component of airport ground support equipment, market demand mainly comes from aircraft engine starting air supply, onboard system testing, and maintenance and repair

operations. In civil airports, military airports, and aviation maintenance bases, towable air start units are widely used due to their relatively simple structure, lower cost, and strong adaptability. From an industry development perspective, with continuously improving airport operational support standards and the diversification of aircraft types, the demand for high-stability and high-reliability air supply equipment continues to grow. At the same time, the equipment is being optimized in terms of energy efficiency, low noise, and operational convenience to meet the requirements of modern high-efficiency airport operations. In the future, driven by the continuous growth of global air transport, airport infrastructure upgrades, and the advancement of green and low-carbon airport construction, the towable air start unit market is expected to maintain stable growth and gradually evolve toward intelligent monitoring, efficient energy utilization, and modular design.
