The global Towel Loom market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

Towel loom is a kind of textile machine specially used for producing towels. It uses two weaving shafts to send out the ground warp yarn and the raised warp yarn respectively, and uses the specific regular movement of the reed to push a group of weft yarns to the weaving mouth, so that the raised warp yarns are in the fabric. The surface is formed into loops and woven into a terry weave. Towel looms are usually composed of loom body, loom head, loom bottom plate, loom wheel and other components
