Tower storage equipment is an automated storage and transportation system designed specifically for the semiconductor industry. It is used to achieve efficient material handling and wafer carrier (Foup) storage between different levels of semiconductor factories. Its structure adopts a vertical tower design to maximize the use of space and ensure accurate and fast access operations through precise automated control. The system can adapt to strict clean room environment requirements and provide stable temperature and humidity control and particle management. Tower storage equipment reduces the risk and cost of manual operation while improving the continuity and flexibility of the semiconductor production process.
