## Abstracts

According to our (Global Info Research) latest study, the global Toxicology Testing market size was valued at USD million in 2023 and is forecast to a readjusted size of USD million by 2030 with a CAGR of % during review period.

The toxicology testing market includes safety assessment of chemicals, drugs, cosmetic products, food additives, etc, without using animals as test models. This testing is performed on advance cell and tissue models to determine safety by studying the potential of the test substances to cause toxicity, such as genotoxicity, skin irritation and sensitization, cytotoxicity, ocular toxicity, organ toxicity, phototoxicity, dermal toxicity, and other toxicities.

The regular use of toxicology testing in pharmaceutical and biotechnology industries is estimated to be one of the primary growth factors for the toxicology testing market. Increasing number of pharmaceutical and biotechnology companies are being set up to cater to the growing population and their demand for new drug therapies. Toxicology testing is carried out to prevent late-stage failures in the discoveries of the chemicals used. Additionally, this test checks the appropriate balance of potency, efficacy, safety, and favorable pharmacokinetics of the drug, to ensure it is safe.
