According to our (Global Info Research) latest study, the global TPMS Button Battery market size was valued at US\$ million in 2025 and is forecast to a readjusted size of US\$ million by 2032 with a CAGR of %during review period.

TPMS is the abbreviation of Tire Pressure Monitoring System. It is a safety system installed on the vehicle to monitor tire pressure and alarm when it deviates. It is the third largest legislative safety product for automobiles after ABS and airbags. Automobile tire pressure monitoring is installed on the tires of the vehicle through sensors, measures the air pressure inside the tires, and transmits the data to the dashboard or other display devices of the vehicle. The tire pressure monitoring system can provide accurate tire pressure information to help the driver detect tire leaks or abnormal tire pressure in time to ensure the safety and performance of the vehicle. Abnormal tire pressure will affect the braking effect of the car, cause tire blowouts, and even cause traffic accidents. If a malfunction occurs during the operation of the car's TPMS equipment, it will pose a great threat to the safe driving of the car.
