The global TPU Hot Melt Adhesive Film market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

Here are some key features and applications of TPU hot melt adhesive film:

Adhesive properties: TPU hot melt adhesive film exhibits excellent adhesive properties when heated and melted. It forms a strong bond upon cooling and provides reliable adhesion to various substrates, including fabrics, plastics, metals, and more.

Versatility: TPU hot melt adhesive film can be used on a wide range of materials, including textiles, leather, foam, and composite materials. It offers good adhesion to both porous and non-porous surfaces.

Bond strength and flexibility: Once cooled and solidified, TPU hot melt adhesive film creates a durable and flexible bond. It maintains its adhesive strength even under stress or movement, making it suitable for applications that require flexibility.

Heat resistance: TPU hot melt adhesive film retains its adhesive properties even at elevated temperatures. It offers good heat resistance, ensuring that the bond remains strong and stable even in high-temperature environments.

Applications: TPU hot melt adhesive film is commonly used in industries such as textiles, footwear, automotive, electronics, packaging, and more. It is suitable for applications such as seam sealing, bonding fabrics or components, laminating materials, and attaching trim or labels.

Easy application: TPU hot melt adhesive film is designed for easy and efficient application. It can be applied using hot melt adhesive equipment, such as hot melt adhesive applicators or laminating machines.

TPU hot melt adhesive film provides a reliable and versatile bonding solution in various industries. It offers advantages such as strong adhesion, flexibility, and heat resistance, making it a popular choice for many adhesive applications.

TPU hot melt adhesive film is a type of adhesive material made from thermoplastic polyurethane (TPU). It is designed to be used in a hot melt adhesive application process, where the adhesive film is heated and melted to create a bond between two surfaces.
