A trace gas analyzer is a device used to detect and measure the concentration of gases that occur in very small amounts in the atmosphere, typically less than 1% by volume. These gases are often referred to as trace gases or greenhouse gases, and include carbon dioxide, methane, nitrous oxide, and others. Trace gas analyzers use various techniques, such as infrared spectroscopy or mass spectrometry, to detect and measure these gases. They are commonly used in scientific research, environmental monitoring, and industrial applications, among other fields.
