## Abstracts

According to our (Global Info Research) latest study, the global Traceable Sensor Calibration Services market size was valued at US\$ 382 million in 2025 and is forecast to a readjusted size of US\$ 547 million by 2032 with a CAGR of 5.3% during review period.

To address the issues of insufficient credibility of sensor measurement data, lack of traceability of measurement values, and difficulties in cross-system data interoperability, traceable sensor calibration services have emerged. Since the continuous improvement of the international metrology system in the latter half of the 20th century, significant progress has been made in the standardization and traceability chain construction of sensor calibration. Currently, traceable sensor calibration services have developed into a complete system encompassing laboratory certification, standard transfer, uncertainty assessment, and digital certificate management. It is widely used in critical fields such as aerospace, precision manufacturing, medical equipment, energy metering, and scientific research, providing internationally recognized accuracy assurance and compliance support for measurement results. It is a fundamental technical service that guarantees the quality of industrial production, the reliability of scientific experiments, and the fairness of trade.
