The global Trach Tube Holder market size is expected to reach \$ 61.58 million by 2032, rising at a market growth of 4.3% CAGR during the forecast period (2026-2032).

In 2025, global sales of Trach Tube Holder reached approximately 23 million units, with an average market price of about USD 1.9 per unit, an annual production capacity of roughly 25 million units, and an industry-average gross margin of approximately 30%.

A tracheostomy tube holder is a medical securement device designed to stabilize and retain a tracheostomy tube or tracheostomy cannula around the patient's neck. It is typically made from foam, cotton, nonwoven fabric, polyester, nylon, polyurethane foam, moisture-wicking layers, skin-friendly backing materials, and hook-and-loop fastening tabs. The device attaches to the neck flange of the tracheostomy tube and helps maintain secure positioning during coughing, patient turning, transport, ventilation, suctioning, and routine tracheostomy care. Its key function is to reduce unnecessary tube movement, accidental decannulation, local skin irritation, pressure-related discomfort, and the operational burden associated with traditional twill ties or adhesive tapes. Common product formats include one-piece holders, two-piece adjustable neckbands, soft foam trach ties, pediatric and neonatal holders, bariatric or extended-length holders, and integrated anti-disconnect holders for ventilator-dependent patients. Major care settings include intensive care units, respiratory therapy departments, ENT wards, acute tracheostomy procedures, long-term care facilities, homecare, and chronic airway management.
