The global Trachea Retractor market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

Trachea retractor is a surgical instrument used during procedures involving the trachea, such as tracheostomies or tracheal surgeries. It is designed to gently separate and hold the tracheal tissues apart, providing better visibility and access to the surgical site. The retractor typically has a curved or angled handle with two blades or prongs that are carefully inserted into the tracheal opening and then spread apart to maintain the desired retraction position. This enables the surgeon to work on the trachea, perform necessary procedures, or create a stable opening for tracheostomy tube placement.
