Abstracts

The global Tracheotomy Extension Tube market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

Tracheotomy extension tube is mainly composed of threaded tube and extension tube, patient interface and machine interface. The tracheotomy extension tube is used as a connecting device between the human breathing tracheal tube and the ventilator to ensure that the ventilator circuit does not pull the tracheal tube, and it can also be used for sputum suction. It can also be connected separately to the endotracheal tube for sputum suction and a humid heat exchanger to prevent sputum from directly blocking the exchanger and suffocating the patient.

This report studies the global Tracheotomy Extension Tube production, demand, key manufacturers, and key regions.
