Track construction and renewal equipment are machinery and tools used in the process of constructing new railway tracks or renewing existing tracks. These equipment play a crucial role in ensuring the safety, reliability, and efficiency of railway infrastructure.

These machines are used to prepare the trackbed and create a stable foundation for the tracks. They can level the ground, compact the subgrade, and install the ballast layers.

These machines are used to excavate and clear the ground where the new track will be laid. They can remove soil, rocks, and debris to prepare the foundation for track construction. These machines are used to remove the old tracks, sleepers, and ballast during track renewals. They can lift, remove, and separate the materials for recycling or disposal.
