The global Track Digital Axle Counter market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

The track digital axle counter is the installation equipment on the stations at both ends of the railway. It uses the closed-loop sensor installed on the rail to monitor the number of train wheel pairs. The equipment is sent to the opposite station. After the train arrives at the opposite station, the opposite station will automatically open the section when the number of wheel pairs is the same as that of the departure station. In other words, it is a railway signal device that can detect passing wheels. It can replace many ordinary tracks circuit.
