## Abstracts

According to our (Global Info Research) latest study, the global Track Digital Axle Counting System market size was valued at USD million in 2022 and is forecast to a readjusted size of USD million by 2029 with a CAGR of % during review period. The influence of COVID-19 and the Russia-Ukraine War were considered while estimating market sizes.

Track Digital Axle Counting System is a device on a railway that detects the passing of a train in lieu of the more common track circuit. A counting head (or 'detection point') is installed at each end of the section, and as each axle passes ahead at the start of the section, counter increments. As the train passes a similar counting head at the end of the section, that counter decrements. If the net count is evaluated as zero, the section is presumed to be clear for a second train.
