The track gauge is a special measuring instrument used to measure the gauge between two rails on a railway line. It is usually composed of a ruler, a scale and a frame on the ruler, and has a T-shaped structure. The design and working conditions of the track gauge need to meet the requirements of use in harsh environments, such as high temperature, low temperature, constant humidity, electromagnetic compatibility, rain, etc., and can withstand abnormal adverse conditions such as falling and vibration. At the same time, in order to ensure the accuracy of the measurement results, the track gauge also needs to be regularly calibrated and maintained.
