A track renewal train, also known as a track relaying train or track renewal system, is a specialized train equipped with various machinery and equipment used to replace or renew railway tracks. It is a comprehensive and efficient solution for conducting large-scale track renewal projects.

These units are responsible for lifting and removing the old tracks, including rails, sleepers, and ballast. They can disassemble the track components and clear the trackbed of the existing infrastructure. These units are used to tamp and stabilize the track by adjusting the ballast and sleepers. They ensure the proper alignment and vertical geometry of the track, improving its stability and ride quality. These units are responsible for laying and aligning the new tracks. They can position and secure the rails, sleepers, and fastening systems with high precision. Some advanced systems can even lay concrete or precast slab tracks.
