According to our (Global Info Research) latest study, the global Track Suspension Link Arm market size was valued at USD 2791.5 million in 2022 and is forecast to a readjusted size of USD 3702 million by 2029 with a CAGR of 4.1% during review period.

A track suspension link arm is the hinged suspension link that connects the chassis and the suspension that carries the wheel.

Increasing popularity of air and active suspension systems contributes to market growth over the forecast period. Dynamic suspension systems play a vital role in electric vehicles, providing driver comfort and safety. Advanced sensors and control systems are used to improve the performance of the system. Hence, the development of new suspension systems that are more energy-efficient, smarter, and lightweight will drive the market over the forecast period. For example, Electronically Controlled Active Suspension Systems (ECASS) have fewer moving parts and operate without fluid in the dampers. The system also uses linear motors and dampers to generate electricity, which is beneficial for electric vehicles. Electric vehicles typically have a lower center of gravity than internal combustion engine vehicles. This improves handling and stability. This could lead to increased demand for advanced suspension systems, further improving the handling and performance of EVs. Additionally, the use of electric motors and battery packs in EVs can provide additional space under the hood, allowing for more innovative suspension designs. Recently, more and more people have turned to electric vehicles for efficient, clean and sustainable environmental reasons. This creates a lucrative growth for the electric vehicle market, thereby driving the growth of the automotive suspension system market. Additionally, autonomous and connected cars require advanced systems to ensure smooth operation and improve safety. Self-driving

cars require advanced sensors and cameras to navigate and communicate with other vehicles, which requires smooth and stable systems to ensure accurate data collection. Connected cars, on the other hand, require a stable, smooth ride for the comfort and safety of passengers, as well as the proper functioning of in-vehicle technologies such as infotainment systems. This drives the market over the forecast period.
