Abstracts

Excavators are heavy construction equipment consisting of a boom, dipper, bucket and cab on a rotating platform known as the 'house'. The house sits atop an undercarriage with tracks or wheels. They are a natural progression from the steam shovels and often mistakenly called power shovels. All movement and functions of a hydraulic excavator are accomplished through the use of hydraulic fluid, with hydraulic cylinders and hydraulic motors. Due to the linear actuation of hydraulic cylinders, their mode of operation is fundamentally different from cable-operated excavators which use winches and steel ropes to accomplish the movements.

SCOPE OF THE REPORT:

This report focuses on the Tracked Excavators in global market, especially in North America, Europe and Asia-Pacific, South America, Middle East and Africa. This report categorizes the market based on manufacturers, regions, type and application. The rising government spending on infrastructure is estimated to be one of the major factors that will have a positive impact on the growth of the market. The importance of infrastructure development is increasing because it is directly proportional to the economic growth of a nation. This in turn, generates jobs and avails important services such as energy, housing, and clean water supply. This encourages MNCs to set up their establishments in countries with a strong infrastructure. Consequently, the living standards and human development index of a country is also enhanced. The increasing focus on the development of infrastructure will drive the demand for construction equipment, which in turn, will boost the adoption of tracked excavators. APAC accounted for the majority market share during 2017 due to the rise in infrastructure projects and the growing demand for construction equipment. The number

of infrastructure projects is increasing in South and Southeast Asian countries such as China, India, Indonesia, and the Philippines due to the rising number of governmental projects such as the construction of roads, airports, and railway lines.

The worldwide market for Tracked Excavators is expected to grow at a CAGR of roughly xx% over the next five years, will reach xx million US\$ in 2023, from xx million US\$ in 2017, according to a new GIR (Global Info Research) study.
