## Abstracts

According to our (Global Info Research) latest study, the global Tracked Underwater Robot market size was valued at US\$ 498 million in 2024 and is forecast to a readjusted size of USD 629 million by 2031 with a CAGR of 3.4% during review period.

In this report, we will assess the current U.S. tariff framework alongside international policy adaptations, analyzing their effects on competitive market structures, regional economic dynamics, and supply chain resilience.

A tracked underwater vehicle is a type of vehicle specifically designed to move and perform tasks in an undersea or underwater environment. This type of robot uses tracks as its main mode of movement. Compared with traditional wheeled or propeller propulsion systems, the tracked design provides better grip and trafficability, which is especially suitable for working in complex terrain conditions, such as soft mud, sand, rock and other uneven seabed surfaces.
