Traction electromagnet is a common type of electromagnet, which works based on the principle of electromagnetic induction. It generates a magnetic field by passing current through a coil, thereby attracting or pushing metal objects. Traction type electromagnets have a wide range of applications in industrial automation, mechanical control, lifting, and other fields. Traction electromagnets are divided into push type and pull type, and their yoke and core parts are made of stacked silicon steel sheets. Has good magnetic conductivity, with better performance during high-frequency switching.
