According to our (Global Info Research) latest study, the global Traction Motor Core market size was valued at USD 2666.4 million in 2023 and is forecast to a readjusted size of USD 7712.2 million by 2030 with a CAGR of 16.4% during review period.

The traction motor in electric vehicle is responsible for converting the electric energy to mechanical energy which is used in propulsion of vehicle in a straight-line motion. Electric vehicle traction motor is used in electrical transmission system like electric hybrid vehicles and battery powered electric vehicles. Inside every electric motor is a stationary stator with a rotor spinning inside it. The stator is made of copper wire coils. When an electric current flows through these coils, a rotating magnetic field is created in the stator which causes the rotor to spin. The rotational movement is based on a simple physical principle: opposite poles in a magnet attract each other, whereas like poles repel.

Consisting of a stator and a rotor, a motor core plays a pivotal role in generating electricity within a motor.

Global key players of traction motor core include Mitsui High-tec, EUROTRANCIATURA, POSCO, Suzhou Fine-stamping and Tempel Steel ,etc. The top five players hold a share about 70%. Japan is the region with the largest share, which has a share about 45%. In terms of product, permanent magnet motor cores is the largest segment, with a share about 80%.
