According to our (Global Info Research) latest study, the global Traction Wheels market size was valued at USD million in 2023 and is forecast to a readjusted size of USD million by 2030 with a CAGR of % during review period.

Traction wheel is the rope wheel on the traction machine, also known as traction rope wheel or drive rope wheel. It is a device that transfers traction power by using the friction between the traction wire rope and the rope groove on the traction rim.

Because the traction wheel has to bear all the dynamic and static loads of the cage, load, weight and other devices, it is required to have great strength, good toughness, wear resistance and impact resistance. In order to reduce the abrasion of the traction wire rope in the groove of the traction wheel, the roughness and hardness of the working surface of the groove should be reasonable in addition to choosing the appropriate groove type.
