Abstracts

The global Tractor Tyres market size is expected to reach \$ 7794 million by 2032, rising at a market growth of 4.4% CAGR during the forecast period (2026-2032).

In 2025, global Tractor Tyres production reached approximately 18.06 million units, with an average global market price of around US\$310 per unit.

The gross profit margin of major companies in the industry is between 18%-33%.

In 2025, the global production capacity of Tractor Tyres was approximately 24.09 million units.

Tractor Tyres are agricultural tires used on tractors and related farming machinery to provide traction, load-bearing capacity, soil protection, flotation, durability, and stability across field, road, and mixed-use conditions. They include bias tires, radial tires, drive tires, front tires, and specialty agricultural tires for different horsepower ranges and farm operations.

The industrial chain of Tractor Tyres covers upstream natural rubber, synthetic rubber, carbon black, steel cord, textile cord, bead wire, compounding chemicals, molds, and tire production equipment. The midstream consists of compound preparation, component forming, tire building, vulcanization, inspection, performance testing, and packaging. Downstream applications mainly include tractors, agricultural machinery dealers, farms, cooperatives, machinery rental, replacement tire markets, and agricultural service providers.

Modern large-scale agricultural mechanization and farmland operation needs expand

the application of tractor tyres. Deep pattern anti-slip design and strong bearing performance adapt to muddy and complex farmland terrain. Wear-resistant and low-pressure structure improves farm operation efficiency.

This report studies the global Tractor Tyres production, demand, key manufacturers, and key regions.
