Abstracts

The traffic management integrated command system is an intelligent platform that integrates various traffic management business subsystems to achieve macro management and control of road traffic safety and smooth flow. This system can provide rapid response, command and dispatch, and police coordination to major traffic incidents, serious traffic jams, rapid control and pursuit, and emergency and disaster relief traffic support. Specifically, the traffic integrated command platform can retrieve the information of passing motor vehicles at the monitoring checkpoint. Once an illegal vehicle is detected, the system will automatically capture and alert the police. The command center will immediately issue instructions to the police on duty on the road to intercept and dispose of the illegal vehicle in a timely manner, to achieve precise strikes. In addition, the intelligent traffic command system should also have core functions such as traffic monitoring center, information service center, decision support center, and command and dispatch center to improve traffic operation efficiency and public safety. Overall, this system is an important tool for using advanced technology to improve urban traffic management.

According to our (Global Info Research) latest study, the global Traffic Management Integrated Command System market size was valued at US\$ million in 2023 and is forecast to a readjusted size of USD million by 2030 with a CAGR of %during review period.
