Abstracts

Traffic management systems refer to the IT solutions provided by vendors to improve the traffic flow and enhance passenger safety. The traffic management systems consume data from disparate sources such as road sensors, CCTV cameras, and traffic control centers. The systems process these data and generate useful information, which is passed on to end-users such as passengers, traffic control agencies, and police stations. Traditionally, traffic management systems helped to save time and reduce wastage of fuel by reducing traffic congestion. However, with the advances in communication technologies and the internet, the traffic management systems now help users in more widely applications by building a whole traffic networking.

According to our (Global Info Research) latest study, the global Traffic Management Systems market size was valued at US\$ 2419 million in 2023 and is forecast to a readjusted size of USD 4362 million by 2030 with a CAGR of 8.9% during review period.
