Abstracts

Traffic management systems refer to the IT solutions provided by vendors to improve the traffic flow and enhance passenger safety. The traffic management systems consume data from disparate sources such as road sensors, CCTV cameras, and traffic control centers. The systems process these data and generate useful information, which is passed on to end-users such as passengers, traffic control agencies, and police stations. Traditionally, traffic management systems helped to save time and reduce wastage of fuel by reducing traffic congestion. However, with the advances in communication technologies and the internet, the traffic management systems now help users in more widely applications by building a whole traffic networking.

SCOPE OF THE REPORT:

This report studies the Traffic Management Systems market status and outlook of Global and major regions, from angles of players, countries, product types and end industries; this report analyzes the top players in global market, and splits the Traffic Management Systems market by product type and applications/end industries.
