Abstracts

The global Traffic Radar Speed Screen market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

The LED radar speed screen has an eye-catching induction display function. On special road sections, it reminds the driver to avoid speeding, which can significantly reduce traffic accidents. When the vehicle enters the detection area of the 'speed feedback sign' radar (about 5M~200M in front of the sign) within the range), the microwave radar will automatically detect the speed of the vehicle and display it on the LED display screen. If the speed exceeds 10%, the yellow LED will remind, and if the speed exceeds 20%, the red LED will alarm. Through these methods, the driver is reminded to reduce the driving speed. speed, thereby effectively reducing road traffic accidents caused by speeding.
