Abstracts

Traffic signs or road signs are signs erected at the side of or above roads to give instructions or provide information to road users. The earliest signs were simple wooden or stone milestones. Later, signs with directional arms were introduced, for example, the fingerposts in the United Kingdom and their wooden counterparts in Saxony.

With traffic volumes increasing since the 1930s, many countries have adopted pictorial signs or otherwise simplified and standardized their signs to overcome language barriers, and enhance traffic safety. Such pictorial signs use symbols (often silhouettes) in place of words and are usually based on international protocols. Such signs were first developed in Europe, and have been adopted by most countries to varying degrees.

Scope of the Report:

This report focuses on the Traffic Signs in global market, especially in North America, Europe and Asia-Pacific, South America, Middle East and Africa. This report categorizes the market based on manufacturers, regions, type and application.

At regional level North America (Revenue market share about 29% in 2015) accounted for the largest market share in the year 2015 followed by Europe (Revenue market share about 36% in 2015) and Asia (Revenue market share about 19% in 2015). This is mainly due to intense government support and technological advancements resulting in broader acceptance of the devices.

Traffic Signs are mass products and in most of the cases represent a sub segment or portfolio of medical device manufacturers with very little scope for product differentiation. This makes the overall market highly competitive and price sensitive in nature.

The Traffic Signs industry major has three applications, such as Guide & Direction Signs, Warning Signs, Regulatory Signs and Others. The worldwide market for Traffic Signs is expected to grow at a CAGR of roughly 4.8% over the next five years, will reach 1120 million US\$ in 2023, from 850 million US\$ in 2017, according to a new GIR (Global Info Research) study.
