Abstracts

'Trail running shoes are footwear designed for off-road travel and include many design features not found on a road-specific model. Trail running shoes involve running or walking in an outdoor environment on a natural terrain, taking advantage of the geographical features offered by each region (usually mountains, deserts, forests, etc.).

Trail running is very different to running on the road. So the trail running shoes are designed with holes, natural debris, uneven ground, and other natural obstacles in mind; they consist of thicker soles, larger and deeper tread, and thicker and stronger uppers (the entire shoe above the sole). Trail running shoes are recommended to runners who run on non-paved, uneven trails. Trail shoes are not necessary for pavement, track, or wood chipped trail runs.'
