Abstracts

The global Trail Snowshoes market size is expected to reach \$ 38 million by 2029, rising at a market growth of 5.8% CAGR during the forecast period (2023-2029).

The growing popularity of snow-related activities such as skiing, hiking, and other winter sports, as well as increasing consumer participation in sports and outdoor recreation activities, has resulted in a booming snowshoe market. Research from the Outdoor Foundation found that 146.1 million Americans ages 6 and older participated in outdoor activities in 2017. The market demand for snowshoes should continue to grow in the coming years as more and more people participate in winter hiking and snowshoeing, with more people participating in these activities in various regions. Rising interest in sports activities is driving the snowshoes market. Snowshoe sales are being driven by increased emphasis on outdoor sporting events as fitness regimes, short-term outdoor recreation and healthier lifestyles become more popular. Furthermore, the growing demand for snowshoes can be attributed to changing demographics, increase in population centers, and growing outdoor recreation industry with a strong focus on healthy living.

Trail snowshoes are narrower and lighter than traditional snowshoes, and they are often worn with lightweight running shoes or cross-training shoes. Snowshoes compact the snow and distribute your weight over a larger surface area with each step, helping you avoid pitfalls.
