A trailed baler is an agricultural machine designed to compress crop residues such as straw, hay, or other plant materials into compact bales for easy handling, storage, and transportation. The baler is towed behind a tractor or other powered equipment, automatically gathering the materials from the ground and forming them into round or square bales, which are then tied or wrapped for further use. Trailed balers are commonly used in haymaking and straw recovery operations, and they are highly efficient for large-scale agricultural activities, reducing the need for manual labor and optimizing fieldwork productivity.
