A trailed crushing baler is an agricultural machine that combines both shredding and baling functions to handle crop residues such as straw and hay. Towed by a tractor or other powered machinery, it first crushes the scattered crop material in the field and then compresses it into round or square bales. This type of baler enhances the efficiency of straw recovery, making it easier to store and transport. Widely used in hay baling and straw processing, its integrated design saves time and labor, making it suitable for large-scale agricultural operations.
