Abstracts

The global Trailer Reefer Unit market size is expected to reach \$ 1684 million by 2032, rising at a market growth of 6.8% CAGR during the forecast period (2026-2032).

In 2025, global Trailer Reefer Unit production is approximately 394 k units, with an average global selling price of around US\$2,594 per unit. Gross margin is about 34%. The average cost is around US\$1,712 per unit. Total production capacity is approximately 486 k units. A Trailer Reefer Unit is a self-contained refrigeration system installed on refrigerated trailers, designed to maintain controlled temperature conditions during transportation. It is widely used for temperature-sensitive goods such as food, pharmaceuticals, and chemicals. The system typically consists of a compressor, condenser, evaporator, and control unit, and can be powered by engine-driven or electric-driven configurations to ensure stable cooling during long-haul and urban logistics operations.

From an industry perspective, the Trailer Reefer Unit market is benefiting from the continuous expansion of global cold chain logistics, particularly driven by fresh food e-commerce, pharmaceutical cold chain, and cross-border food transportation. At the same time, stricter food safety regulations and cold chain standardization are increasing demand for high-reliability and precise temperature control systems. Looking forward, the industry is expected to accelerate toward electrification, decarbonization, and intelligence. Electric refrigeration units (E-reefers) are gradually replacing conventional engine-driven systems to reduce emissions and fuel dependency. In addition, IoT-based remote monitoring and smart temperature control systems are improving real-time visibility and operational efficiency. Furthermore, next-generation high-efficiency compressors and eco-friendly refrigerants will continue to drive the industry toward greener cold chain solutions.
