Abstracts

According to our (Global Info Research) latest study, the global Train Interior Lighting market size was valued at USD million in 2023 and is forecast to a readjusted size of USD million by 2030 with a CAGR of % during review period.

Lighting: When the train is traveling, it may pass through tunnels, hills, basins and other terrains, and the light in the carriage will change with the outdoor environment.

Therefore, turning on the interior lighting system can adapt to different outdoor lighting conditions and provide passengers with a more comfortable riding environment.

Convenient driving: In extreme weather conditions such as heavy rain, heavy fog, heavy snow, etc. with low visibility, turning on the lights can play the same role as turning on the lights of a car, lighting the way forward.

Energy saving and environmental protection: Modern trains use advanced lighting technology, such as LED lights, which have the advantages of energy saving, environmental protection and long service life.

At the same time, the lighting brightness is automatically adjusted according to the light brightness inside and outside the cabin, which can effectively reduce energy consumption.
