A train vacuum toilet is an onboard sanitation system that uses negative pressure vacuum technology to rapidly transport waste into a sealed storage tank. It is widely used in high-speed trains intercity rail metro systems and long-distance passenger trains. The system typically consists of a vacuum pump unit toilet module control system waste holding tank and piping network. It features low water consumption strong sealing performance effective odor control and environmentally compliant discharge making it a standard configuration in modern railway vehicles.

The global train vacuum toilet market is primarily driven by high-speed railway expansion rolling stock refurbishment and increasingly stringent environmental discharge standards. Europe and China represent the largest demand regions while North America and the Middle East are showing steady growth with rail network expansion. The competitive landscape is relatively concentrated with system integrators playing a leading role. Products are evolving toward intelligent control modular design and lightweight structures. With continued railway investment in emerging markets and the advancement of green transportation policies the industry is expected to maintain stable growth in the coming years.
