Abstracts

The global Tralametinib market size is expected to reach \$ 75.89 million by 2032, rising at a market growth of 22.0% CAGR during the forecast period (2026-2032).

Tunlametinib is a novel, highly selective oral MEK1/2 small-molecule targeted anti-tumor drug. It specifically acts on the RAS-RAF-MEK-ERK signaling pathway, inhibits the abnormal activity of MEK kinase, blocks the transmission of proliferation and metastasis signals of tumor cells, and thereby effectively suppresses tumor progression. Primarily developed for the treatment of solid tumors with NRAS mutations, it has high target specificity, favorable oral bioavailability and controllable safety, and occupies an important position in the field of innovative anti-cancer drugs. In 2025, global Tunlametinib production reached approximately 62,500 Bottles.

Tunlametinib, the world's first MEK1/2 targeted inhibitor approved for NRAS-mutant advanced melanoma, is a Class 1 innovative drug independently developed in China, filling the long-standing gap in targeted therapy for this rare tumor. It was rapidly included in the national medical insurance list after launch, significantly improving patient access and securing clear market access advantages. With a unique mechanism of action, favorable clinical efficacy and manageable safety profile, it has become a standard second-line treatment option for NRAS-mutant melanoma and received high-level recommendations from authoritative clinical guidelines. Beyond melanoma, ongoing clinical investigations are exploring its potential in various RAS/RAF-mutant solid tumors such as colorectal cancer and neurofibromatosis, indicating substantial potential for future indication expansion. The current competitive landscape remains favorable with no direct ?? competitors. Supported by policy incentives for domestic innovative drugs and unmet clinical needs, it holds promising prospects for sustained market growth and international expansion in the long term?
