Abstracts

The global Trans Sodium Crocetin market size is expected to reach \$ 99 million by 2032, rising at a market growth of 12.3% CAGR during the forecast period (2026-2032).

In 2025, global sales volume of trans sodium crocetin reached approximately 3.69 tonnes, with the global average market price at around USD 11,500/kg. The gross margin of major industry players was approximately 50%–75%. Trans sodium crocetin is a water-soluble carotenoid derivative formed by the salification of crocetin. It is typically produced through extraction and conversion from saffron, crocin, or crocetin, and can also be prepared through semi-synthesis or custom synthesis. Its parent compound, crocetin, is one of the key active components in saffron, featuring a strong conjugated double-bond structure and biological activity, while the disodium salt form can improve its water solubility, dispersibility, and formulation applicability. The upstream raw materials of trans sodium crocetin mainly include saffron, crocin, crocetin, gardenia-derived carotenoid raw materials, salification reagents, and extraction and purification auxiliaries, among which crocetin or crocin intermediates are the key raw materials. Its downstream applications mainly cover pharmaceuticals, food, and cosmetics, with cosmetics and pharmaceutical R&D currently representing the major application scenarios.
