The global Transcranial Ultrasound Stimulation (TUS) System market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

Transcranial ultrasound stimulation (TUS) is a non-invasive nerve regulation technology. It is a new brain function regulation technology that uses low intensity pulsed ultrasound to act on the cerebral cortex or deep brain area through the skull and other tissues, thus causing changes in nerve activity. The mechanism of nerve regulation by transcranial ultrasound stimulation can be divided into cavitation, thermal effect and mechanical deformation.
