Abstracts

Transdermal Patch is a medicated adhesive patch that is placed on the skin to deliver a specific dose of medication through the skin and into the bloodstream.

Scope of the Report:

This report focuses on the Transdermal Patch in global market, especially in North America, Europe and Asia-Pacific, South America, Middle East and Africa. This report categorizes the market based on manufacturers, regions, type and application.

The technical barriers of transdermal patch are high, and the core technology of transdermal patch concentrates in relative large companies. These companies mainly concentrate in USA, Japan and Germany. Japan account for almost 50% of total transdermal patch in 2015, followed by North America with 29% of production share. In the past few years, the price of transdermal patch has a little change and we expect the price will slightly lower. However, the improvement of energy, transportation costs, employee wages, and equipment depreciation will play a significant role in promoting the cost of transdermal patch.

As the same time, companies are focusing on technological innovation, equipment upgrades, and process improvements, to reduce costs and improve quality. With the snatch for market share in emerging regions, the competition in transdermal patch industry will become more intense.

The worldwide market for Transdermal Patch is expected to grow at a CAGR of roughly xx% over the next five years, will reach xx million US\$ in 2023, from xx million US\$ in 2017, according to a new GIR (Global Info Research) study.
