## **Abstracts**

According to our (Global Info Research) latest study, the global Transfer Autonomous Mobile Robot (AMR) market size was valued at US\$ 730 million in 2024 and is forecast to a readjusted size of USD 958 million by 2031 with a CAGR of 4.0% during review period.

In this report, we will assess the current U.S. tariff framework alongside international policy adaptations, analyzing their effects on competitive market structures, regional economic dynamics, and supply chain resilience.

The load-carrying AMR, or Automated Mobile Robot, is an advanced automation device integrated with sophisticated sensors, control systems, and navigation technology. It is capable of autonomously moving within factories, warehouses, and other industrial settings to perform the transportation and loading of goods. These robots are not confined to fixed paths; they can dynamically plan routes based on predefined maps and algorithms, avoiding obstacles, and safely coexist with human workers and other robots. Load-carrying AMRs enhance the efficiency of goods handling, reduce manual labor intensity, and improve the flexibility and reliability of overall operational processes, bringing revolutionary changes to modern logistics and smart manufacturing industries. Their design typically includes a carrying platform, drive system, charging system, and sensors and software for navigation and communication, enabling them to execute tasks efficiently in complex industrial environments.
