## Abstracts

According to our (Global Info Research) latest study, the global Transformer Breathers market size was valued at USD million in 2023 and is forecast to a readjusted size of USD million by 2030 with a CAGR of % during review period.

Transformer breathing is a process where the increased load on the transformer results in the heating up of the insulating oil, which in turn, expands and is expelled out into the conservator tank fitted on the top of the power transformer. A transformer breather is a type of equipment that is connected to the conservator of an oil-immersed transformer. It consists of silica gel breathers, which are capable of absorbing the moisture from the air that passes through the breather. It enables the dry air to pass through and thus, enhances the life of the transformer oil and in turn, the transformer.

According to our research, the global market for medical devices is estimated at US\$ 603 billion in the year 2023, and will be growing at a CAGR of 5% during next six years.
