According to our (Global Info Research) latest study, the global Transformer Condition Monitoring System market size was valued at USD 2690.7 million in 2022 and is forecast to a readjusted size of USD 4768.2 million by 2029 with a CAGR of 8.5% during review period. The influence of COVID-19 and the Russia-Ukraine War were considered while estimating market sizes.

The growth of the power transformer monitoring system market is primarily driven by rising energy consumption due to population boom in emerging economies. Moreover, the ongoing installation of high-power transmission installations and upgrades of power transmission systems will contribute to this growth. The transformer monitoring system market accounts for 3% to 5% of its parent market, the transformer market.

Automation, big data analytics and the Internet of Things (IoT) are critical in today's highly industrialized and evolving industrial environment. Planning downtime and actually monitoring various parameters of transformers may seem obsolete for distribution companies today.

This new technology enables easy monitoring of several common operating parameters of transformers from the IT unit or office. Transformers effectively convert higher transmission voltages to lower distribution voltages.

This report is a detailed and comprehensive analysis for global Transformer Condition Monitoring System market. Both quantitative and qualitative analyses are presented by manufacturers, by region & country, by Type and by Application.
