According to our (Global Info Research) latest study, the global Transformer Demagnetizer market size was valued at USD million in 2022 and is forecast to a readjusted size of USD million by 2029 with a CAGR of % during review period.

A transformer demagnetizer is a device used to remove residual magnetism from the core of a transformer. Transformers operate on the principle of electromagnetic induction and utilize a magnetic core to transfer electrical energy from one circuit to another. Over time, the magnetic core can retain residual magnetism, which can negatively affect the transformer's performance and efficiency.

Transformer demagnetizers find application in various industries, including the power industry, manufacturing sector, transportation, metallurgy, mining, and electronic and communication equipment manufacturing.
