Abstracts

A transformer is an electrical equipment that helps in varying the voltage of the electric current. This stepping up and stepping down of the voltage is especially important when a safe amount of electric current is required to be supplied to the end users. In order to ensure continuous and safe transmission of electricity from the power generation plant to the end users, the transformers utilized for this purpose have to be monitored continuously in real time. This is achieved by installing a transformer monitoring system within a transformer housing. Requirement of a transformer monitoring system is especially important when faults and anomalies within the grid or circuit have to be detected before the complete breakdown of the transformer occurs. These transformer monitoring systems are especially prevalent in areas where the supply of electric power is erratic and power outages are common, thereby signifying a healthy demand for the system in the third world countries.

Scope of the Report:

This report focuses on the Transformer Monitoring System in global market, especially in North America, Europe and Asia-Pacific, South America, Middle East and Africa. This report categorizes the market based on manufacturers, regions, type and application. As international economic situation is complicated, in the next few years there will be many uncertainties. Due to the government' policy and the high sales of Transformer Monitoring System in the international market, the current demand for Transformer Monitoring System product is relatively stable in the mature market, such as North America and Europe, but the demand in Asia-Pacific is relatively higher due to the downstream demand.

Although sales of Transformer Monitoring System brought a lot of opportunities, the

study group recommends the new entrants who just having money but without technical advantage and downstream support, do not to enter into the Transformer Monitoring System field hastily.

The worldwide market for Transformer Monitoring System is expected to grow at a CAGR of roughly 7.0% over the next five years, will reach 2380 million US\$ in 2023, from 1580 million US\$ in 2017, according to a new GIR (Global Info Research) study.
