## Abstracts

According to our (Global Info Research) latest study, the global Transformer Single Dissolved Gas Analyzers market size was valued at USD 99.2 million in 2023 and is forecast to a readjusted size of USD 114 million by 2030 with a CAGR of 2.0% during review period.

This report focus on Transformer Single Dissolved Gas Analyzers. Dissolved Gas Analyzer is used to determine the concentrations of specific gasses dissolved in the oil. Insulating materials within transformers and electrical equipment break down to liberate gases within the unit. The distribution of these gases can be related to the type of electrical fault, and the rate of gas generation can indicate the severity of the fault. The identity of the gases being generated by a particular unit can be very useful information in any preventative maintenance program.

The laboratory services segment accounted for a major share of the market, due to the increasing rising awareness regarding transformer supervising and the elevating need for advanced process analytics. Increasing investment in power transformers and industrial infrastructures is anticipated to drive the global dissolved gas analyzers market. Dissolved gas analyzers help to extract even small traces of fault gasses in the transformer oil at the initial stages. Several governments across the globe are planning to automate their electricity distribution system. For instance, in 2019, The Myanmar National Electrification Plan announced that it will automate 100% of the electricity distribution system by 2030. A rising number of regulations on reducing carbon footprints and environmental pollution across the globe is expected to drive the dissolved gas analyzer market during the forecast period. The key restraint of the market is its high cost and limitations in diagnosis techniques to precisely locate the

fault. Dissolve gas analyzers have a high cost of ownership, which consists of installation, lifetime service operation, and maintenance.
