Abstracts

The global Transformer Vacuum Oil Filling Equipment market size is expected to reach \$ 59.19 million by 2032, rising at a market growth of 5.7% CAGR during the forecast period (2026-2032).

In 2025, global sales of Transformer Vacuum Oil Filling Equipment were approximately 620 units, with an average manufacturer-side selling price of about US\$63,000 per unit. The gross margin of major manufacturers was approximately 23%–32%.

Transformer Vacuum Oil Filling Equipment is a specialized process equipment used in the manufacturing, assembly, and maintenance of oil-immersed transformers. Its core function is to evacuate the transformer itself or a vacuum working chamber and then inject insulating oil into the transformer under controlled vacuum conditions. The equipment typically consists of a vacuum system, oil storage and transfer system, oil filling pipelines, flow metering system, valve assembly, and automatic control system. Some models also integrate insulating oil heating, filtration, degassing, and vacuum drying functions. Vacuum oil filling helps reduce residual air and moisture in windings, insulating paper, and internal structural gaps, improves oil impregnation performance, and lowers the risk of air bubbles and partial discharge.

The upstream supply chain mainly includes vacuum pumps, Roots pumps, oil storage tanks, oil transfer pumps, flow meters, vacuum valves, filters, heaters, PLC systems, and vacuum measurement components. Downstream demand mainly comes from manufacturers of oil-immersed distribution transformers, power transformers, converter transformers, traction transformers, and renewable energy transformers, while the equipment is also used in certain large-transformer maintenance and servicing applications. Compared with conventional vacuum oil filtration equipment, Transformer

Vacuum Oil Filling Equipment is centered on the transformer itself, with the key process involving transformer evacuation followed by oil filling under vacuum, rather than merely filtering, dehydrating, or degassing the insulating oil.
