Transglutaminase is an enzyme that is used in the food industry as a binding agent, to improve the texture, shelf life, and appearance of food products. It is also known as meat glue or TG enzyme. Transglutaminase is a naturally occurring enzyme that is found in many organisms, including humans. However, the enzyme used in the food industry is typically produced using bacteria or fungi. Transglutaminase is commonly used in meat products such as ham, sausage, and chicken nuggets, as well as in seafood, dairy, and bakery products. It can help to improve the texture of these products by creating a stronger bond between the proteins in the food, which can result in a more tender and cohesive product. Transglutaminase can also be used to create new food products, such as vegetarian meat substitutes, by binding plant proteins together.
