Abstracts

The global Transmission Electron Microscope (TEM) market size is expected to reach \$ 1036.1 million by 2029, rising at a market growth of 5.7% CAGR during the forecast period (2023-2029).

Global main manufacturers of transmission electron microscope (TEM) include Thermo Fisher Scientific (FEI), JEOL and Hitachi, etc. The top three players hold a share about 97%. Japan is the largest producer of transmission electron microscope (TEM), holds a share about 69%, followed by North America and Europe, with share 23% and 8%, separately. The largest market is North America, holds a share about 30%. In terms of product type, 80KV-200KV is the largest segment, occupied for a share of about 28%, and in terms of application, Life Science has a share about 76 percent.

Transmission electron microscopy (TEM) is an imaging technology in which electron beams pass through very thinly sectioned specimens. As the electrons are transmitted through the specimen and interact with its structure, an image resolves that is magnified and focused onto an imaging medium, such as photographic film or a fluorescent screen, or captured by a special CCD camera. Because the electrons used in transmission electron microscopy have a very small wavelength, TEMs can image at much higher resolutions than conventional optical microscopes that depend on light beams. Due to their higher resolving power, TEMs play an important role in the fields of virology, cancer research, the study of materials, and in microelectronics research and development.

This report studies the global Transmission Electron Microscope (TEM) production, demand, key manufacturers, and key regions.
